

OPEN CAVITY PLASTIC PACKAGES

Advantages:

- IC Prototypes in any Plastic Package
- Mechanically & Electrically Identical to Production Parts
- Unlimited Package Configurations
- Turnaround in 24 hours or less
- Ideal for rapid prototype assembly, design verification and customer samples
- No Tooling Charges
- No Minimum Orders

Quik-Pak's Open Cavity Plastic Packages enable faster design verification and quicker time to market for your new devices. A proprietary process is used to turn any plastic package - whether dummies, electrical test rejects or excess inventory - into a platform for new prototypes. The Quik-Pak process creates an open cavity and exposes the paddle and pads for easy assembly.

Production-Quality Packages

Quik-Pak's Open Cavity Plastic Packages are mechanically and electronically identical to your future production parts. You can insert these prototype packages directly into test sockets and boards, thereby eliminating the risks associated with using non-equivalent packages.

Flexibility

The possibilities are endless, as Quik-Pak can open any plastic package. You can provide the packages or we can procure them to meet your specifications. All of the most popular packages configurations are available in any size or lead count.

Speed

When you need to meet a project or customer deadline, you can count on Quik-Pak's reliable on-time delivery options - including same-day expedited service.

Make Quik-Pak a standard part of your product development and verification process. Our Open Cavity Plastic Packages are the best solution for your prototypes, offering production-quality packages, flexibility and speed to meet your needs.

When you need a turn-key solution, Quik-Pak can do it all - from dicing, package procurement and preparation to die attach, wire bonding, encapsulation, remolding and marking. Quik-Pak meets your deadline and delivers production-quality prototype parts for internal testing or customer samples.
